

SOUTH AUSTRALIA.

ANNUAL REPORT

OF THE

REGISTRAR-GENERAL OF BIRTHS, DEATHS,
AND MARRIAGES.

1895.

ADELAIDE:

BY AUTHORITY: C. E. BRISTOW, GOVERNMENT PRINTER, NORTH-TERRACE.

1896.

REGISTRAR-GENERAL OF BIRTHS, ETC.—ANNUAL REPORT, 1895.

Office of Registrar-General of Births, &c., June 29th, 1896.

Sir—I have the honor to submit to you the following report on the births, deaths, and marriages registered in the province in the year 1895.

Near the end of the report will be found, under their proper heading, some observations and statistics respecting the Northern Territory ; but, with these exceptions, everything stated with regard to the colony, in either the report itself or the tables accompanying it, is to be understood as referring to the southern part of the province only—that is, to South Australia proper.

POPULATION.

On December 31st, 1895, the estimated population of the province, exclusive of the inhabitants of the Northern Territory and of aborigines, was 352,653, viz., 181,161 males and 171,492 females. This showed an advance of 4,933 on the estimated population at the beginning of the year—an increase which was lower than that of any other year since 1890.

The following table, compiled from the quarterly returns of the Collector of Customs published in the *Government Gazette*, shows the distribution as to route of the recorded immigration and emigration in 1895.

Route.	INWARDS.				OUTWARDS.			
	Males over 12 years.	Females over 12 years.	Males under 12 years.	Females under 12 years.	Males over 12 years.	Females over 12 years.	Males under 12 years.	Females under 12 years.
By sea	27,325	6,262	1,764	1,411	29,965	6,945	1,978	1,601
Via Morgan	768	262	92	102	581	224	53	62
Via Cockburn	8,541	3,831	1,358	1,294	7,213	3,335	1,145	1,119
Via Serviceton	8,094	4,518	208	114	7,950	4,178	222	106
	44,728	14,873	3,422	2,921	45,709	14,682	3,398	2,888

Taken as they stand (that is, without considering an allowance which has been made for unrecorded departures—563 males and 387 females), the figures in the table would show that with respect to persons over 12 years of age the population lost 981 males and gained 191 females, and that in regard to children under that age it gained 24 males and 33 females—the result being a decrease of 957 males and an addition of 224 females. The figures in the table show also that there was a gain of 304 persons *via* Morgan, of 2,212 *via* Cockburn, and of 478 *via* Serviceton, and a loss of 3,727 by sea.

The estimated mean population for the year was 348,539 (179,229 males and 169,310 females), being greater by 4,914 than the mean population of 1894.

Throughout this report and the statistical tables accompanying it the annual rates of births, deaths, and marriages to population are invariably calculated on the mean populations of the years referred to.

BIRTHS.

The births registered in 1895 numbered 10,537, being more by 61 than those recorded in the previous year. The natural addition to the population from the excess of births over deaths was 6,616, which was greater by 141 than the corresponding increase of 1894. Of the total births registered 5,404 were male births and 5,133 female, the proportion of the former to 100 of the latter being 105·28. In England, according to recent returns, the mean proportion for the five years ended with 1894 was 103·60, while the latest “Victorian Year Book” gives 104·33 as the mean ratio for the Australasian colonies, taken as a whole, the calculation being based on the returns of the four years, 1890-3.

In the first quarter the births registered in the colony numbered 2,590, in the second 2,771, in the third 2,772, and in the fourth 2,404, the births of the second and third quarters being, according to the almost invariable rule, more numerous than those of the first and last. The birth rate per 1,000 of the mean population was 30·23, against 30·49 in 1894, and was below the birth rate of any other of the last thirty-six years.

By means of a tabular statement, which will be found later on, and the information in which—like all similar information given in this report—has been taken from the latest and most authentic sources, the birth rate of South Australia can be compared with the birth rates of the other Australasian colonies, the different parts of the United Kingdom, and several other countries.

Illegitimate Births.—The births entered in 1895 as illegitimate numbered 330 (177 males and 153 females), against 320 in the previous year. The percentage of illegitimate births to the total births registered during the year was 3·13.

The

The following table shows the percentages in the seven Australasian colonies and the different parts of the United Kingdom in the years specified:—

	1889.	1890.	1891.	1892.	1893.	1894.	1895.	Mean.
South Australia	2·47	2·50	2·93	2·93	2·84	3·05	3·13	2·84
New South Wales	5·33	5·26	5·36	5·71	6·16	6·14	6·50	5·78
Victoria	4·92	5·09	5·36	5·59	5·46	5·51	5·33	5·32
Queensland	4·68	4·85	4·65	5·05	4·97	4·52	4·93	4·81
Western Australia	—	—	—	5·89	4·16	4·66	4·47	4·79
Tasmania	4·00	4·05	4·05	4·75	4·40	5·09	4·97	4·47
New Zealand.....	3·32	3·29	3·49	3·32	3·70	3·80	4·50	3·63
England and Wales	4·6	4·4	4·2	4·2	4·2	4·3	—	4·32
Ireland	2·8	2·7	2·7	2·5	2·6	2·7	—	2·67
Scotland.....	7·85	7·54	7·57	7·35	7·40	7·28	—	7·50

For the convenience of reference and of comparison the South Australian rates of illegitimacy for fifteen years are here appended:—

1881	2·25	1890	2·50
1882	2·25	1891	2·93
1883	1·75	1892	2·93
1884	2·10	1893	2·84
1885	2·42	1894	3·05
1886	2·38	1895	3·13
1887	2·49		
1888	2·67		
1889	2·47		
		Mean of fifteen years	2·54

DEATHS.

The deaths registered in 1895 numbered 3,921, being fewer by 80 than those of the previous year. The death of males were 2,165 and of females 1,756, the proportion of the former to 100 of the latter being 123·29, which was greater by 18·01 than the proportion of male to female births. Of the whole deaths of the year 990 were registered in the first quarter, 905 in the second, 839 in the third, and 1,187 in the fourth, the mortality of the second half of the year being, contrary to the general rule, greater than that of the first. The death rate per 1,000 of the mean population was 11·25, against 11·64 in the previous year. It was the lowest death rate on record. It may be stated here that in every one of the 11 years, 1885-1895, the death rate was low.

By means of the tabular statement which has already been referred to, and which will be found later on, the death rate of South Australia can be compared with the death rates of the other Australasian colonies, the different parts of the United Kingdom, and several other countries.

Causes of Death.—Arranged in their respective classes and numbers, the causes of death in 1895 and the previous year were as follows:—

	1894.	1895.
Specific febrile or zymotic diseases.....	605	530
Parasitic diseases	13	16
Dietetic diseases	32	29
Constitutional diseases	700	702
Developmental diseases.....	428	446
Local diseases	1,765	1,708
Violence	226	230
Ill-defined and not specified causes.....	232	260

It will be seen from this that, comparing the causes of death in the two years by classes, there were in 1895 small increases in the 2nd, 4th, 5th, 7th, and 8th classes, while there were decreases in the remaining classes. The remarkable diminution in the number of deaths from “ specific febrile or zymotic diseases ” was chiefly owing to a large decrease in deaths from scarlet fever, measles, and diphtheria.

As very full particulars are given in the tables accompanying this report respecting the different causes of death specified in them, it is considered necessary to refer specially here to only some of those in the zymotic class and a few of the other causes.

Scarlet Fever, Measles.—There were 10 deaths from scarlet fever, against 35 in 1894, and 2 deaths from measles, against 28 in 1894.

Whooping Cough.—There were 44 deaths from whooping cough, against 60 in 1894.

Enteric Fever.—The deaths from enteric or typhoid fever numbered 71 (37 males and 34 females), being fewer by 9 than those registered in 1894.

The following table shows the death rates from this disease per 1,000 of the mean population for the last fourteen years:—

1882	0·51	1890	0·30
1883	0·46	1891	0·23
1884	0·44	1892	0·26
1885	0·43	1893	0·18
1886	0·31	1894	0·23
1887	0·47	1895	0·20
1888	0·35		
1889	0·42		
		Mean of fourteen years	0·34

For comparison it may be stated that in England, according to the recent returns of the Registrar-General, the rate in 1894 was only 0·16, and the mean annual rate for the quinquennium ended with that year 0·17, while, according to the latest "Victorian Year Book," if death from simple and ill-defined fevers (which deaths, however, are rarely more than a few) be counted along with those from enteric fever, the mean annual rates for the Australasian colonies for the five years ended with 1892 were :—

Tasmania	0·52	South Australia	0·33
Queensland	0·52	Western Australia	0·31
Victoria	0·49	New Zealand	0·22
New South Wales	0·35		

It would seem, therefore, that in reference to enteric fever the colonies compare unfavorably with England. Only 1 of the deaths from enteric fever was of a child under 5 years of age, and only 6 were of persons over 45 years. In the annual report for 1889 it was stated that "As many of the deaths from this disease occurred in public hospitals, and were of persons who had come from a distance—in some cases even from beyond the limits of the colony—and as many others were of persons who had returned ill to their homes from various directions, it would serve no useful purpose to give a minute detail of the local distribution of the deaths." For similar reasons minute details of such distribution are not given in this present report; but it may be stated that 48 of the deaths occurred in the four districts forming "Adelaide and suburbs" (that is, Adelaide, Norwood, Hindmarsh, and Port Adelaide), only 5 in the districts south of Adelaide district, and the remaining 18 in the other parts of the colony.

It is noteworthy how very few deaths from this disease occur in all that portion of the colony which lies south of the district of Adelaide. From 1887 to 1895, they numbered in each year respectively only 4, 8, 8, 9, 1, 1, 2, 4, and 5.

Diphtheria, Croup.—The deaths from diphtheria in 1895 numbered 37 (15 males and 22 females), being fewer by 60 than those of the previous year, and being the lowest number registered in any year since 1877. The proportion of deaths from this disease per 1,000 of the mean population was 0·11, against 0·28 in 1894. As usually happens, diphtheria continued to claim its victims throughout the entire year, though it was less destructive in the second quarter than in any of the other three. Only 5 of the deaths were of persons over 10 years of age. Judging from the returns of several years, it would seem that, though no age protects a person from the liability of an attack from this malady, the mortality from it is chiefly confined to children under 10 years old. Of the total deaths from this disease 12 were registered in the four districts forming "Adelaide and suburbs," 1 in the districts south of Adelaide district, and the remaining 24 in the other parts of the colony.

Both in the colonies and in England there seem to be, in many cases, considerable difficulty and uncertainty in distinguishing between diphtheria and croup. Occasionally, therefore, statistical writers count together the deaths from these two diseases. The deaths from croup in 1895 numbered 16 (13 males and 3 females), against 16 in the previous year and 30 in 1893.

Influenza or la Grippe.—The deaths from influenza in 1895 numbered 115 (58 males and 57 females), against 53 in the previous year. Ever since 1890, inclusive, this disease has been very destructive, though for many years before that time it troubled the colony but very little.

Phthisis.—The deaths from phthisis were 335 (166 males and 169 females), being fewer by 21 than those registered in 1894. Of the total deaths from all causes, 8·54 per cent. were attributed to phthisis, against 8·90 in the previous year, while the proportion of deaths from this disease per 1,000 of the mean population was 0·96, against 1·04 in 1894.

The following table shows the proportions for the last eleven years :—

1885	0·99	1892	0·94
1886	1·12	1893	1·01
1887	1·16	1894	1·04
1888	1·19	1895	0·96
1889	0·94		
1890	0·94	Mean of eleven years	1·03
1891	1·04		

In England the proportion in 1894 was 1·39, not only being less than the mean annual rate (1·52) for the quinquennium ended with that year, but being the lowest rate ever recorded there. For comparison the rates of the seven Australasian colonies for the year 1892 are here appended :—

Victoria	1·36	Tasmania	0·84
Queensland	1·02	Western Australia	0·84
South Australia	0·94	New Zealand	0·82
New South Wales	0·86		

Cancer.—The deaths from cancer (including malignant new growths) numbered 166 (86 males and 80 females), being more by 4 than those registered in 1894, and being, with one exception, the greatest number ever recorded in one year. The proportion of deaths from this disease per 1,000 of the mean population was 0·48, against 0·47 in the previous year.

For the last eleven years the rates were as follows :—

1885	0·32	1892	0·45
1886	0·34	1893	0·51
1887	0·36	1894	0·47
1888	0·38	1895	0·48
1889	0·43		
1890	0·41	Mean of eleven years	0·42
1891	0·49		

In England the proportion in 1894 was 0·71, which was above the mean annual rate (0·70) for the quinquennium ended with that year, and was the highest rate ever recorded there. For comparison the rates of the seven Australasian colonies for the year 1892 are here appended :—

Victoria	0·59	New South Wales	0·43
New Zealand	0·48	Queensland	0·31
South Australia	0·45	Western Australia	0·29
Tasmania	0·45		

All the deaths in South Australia in 1895 from cancer, except 5, were of persons over 30 years of age. For some years the records of cancer have, on the whole, been tending upwards, both in these colonies and in England. Referring to the increase in the latter country, the Registrar-General of England, in the Fifty-second Annual Report, states that some of it is attributable to increased accuracy in distinguishing and stating causes of death, but adds that "it must be admitted, as at any rate highly probable, that a real increase is taking place in the frequency" of cancerous diseases, including all malignant new growths. .

Diseases and Accidents of Pregnancy and Childbirth.—The deaths ascribed to these causes, including puerperal fever, were 48, against 42 in the previous year. The proportion which deaths from these causes bore to 1,000 registered births was 4·56, against 4·01 in 1894. The following table shows the proportions in this colony, Victoria, and England in the years specified :—

	South Australian Rate.		Victorian Rate.		English Rate.
1882	6·46	6·58	5·09
1883	4·39	5·74	5·06
1884	4·14	7·04	4·79
1885	4·40	5·61	4·98
1886	3·22	6·23	4·29
1887	4·99	5·27	4·69
1888	4·09	5·42	4·73
1889	2·81	4·48	4·05
1890	3·67	5·30	4·89
1891	5·68	4·99	5·24
1892	4·36	4·63	5·78
1893	5·24	4·90	6·51
1894	4·01	—	5·36
1895	4·56	—	—
Mean.....	4·43	Mean....	5·52	Mean....	5·04

Infantile Mortality.—The deaths of infants under 1 year of age numbered 1,000 (558 males and 422 females), against 984 in 1894, and were in the proportion of 9·49 to 100 births registered. From 1885 to 1895 the proportions were as follows :—

1885.....	11·34	1891.....	9·09
1886.....	12·61	1892.....	9·69
1887.....	11·12	1893.....	11·65
1888.....	9·59	1894.....	9·39
1889.....	9·42	1895.....	9·49
1890.....	9·65		

The most recent returns give the proportions in the other Australasian colonies as follows :—

	1895.		1895.
Western Australia.....	14·33	Queensland	9·12
New South Wales.....	10·60	New Zealand.....	8·83
Victoria	10·24	Tasmania	8·15

On the whole the colonies stand well in regard to infantile mortality, since, according to the returns of the Registrar-General of England, the two lowest proportions known in that country since the introduction of registration were 13·00 in 1881 and 13·50 in 1879, while the proportion has in several years been over 15·00, and in some even over 16·00. For the quinquennium ended with 1894 the mean proportion in England was 14·88.

MARRIAGES.

The marriages registered in 1895 numbered 2,048, being fewer by 46 than those of the previous year, and being the lowest number recorded in any year since 1887. The marriage rate for the year (that is, the rate of marriages, not of persons married) per 1,000 of the mean population was 5·88 against 6·09 in 1894, and was the lowest rate recorded for at least five and twenty years. The marriages in the first quarter numbered 512; in the second, 570; in the third, 443; and in the fourth, 523.

By means of the tabular statement which has been already referred to, and which will be found later on, the marriage rate of South Australia can be compared with the marriage rates of the other Australasian colonies, the different parts of the United Kingdom, and several other countries.

Table 13, accompanying this report, gives detailed information as to the ages of the persons married, and shows how many of them were bachelors or widowers, spinsters or widows, and how many were unable to write their names. The number of marriages celebrated during the year according to the ceremonies of each religious denominations and the number of civil marriages are shown in the following statement :—

Church of England	417	Presbyterian.....	84
Wesleyan	313	Church of Christ	67
Roman Catholic	272	Salvation Army	24
Primitive Methodist	202	Christian Brethren	10
Bible Christian.....	161	Unitarian	8
Lutheran	140	Welsh Free Church.....	7
Congregationalist.....	121	Officiating Registrars	6
Baptist	106	Jewish	3
Registrar-General, Deputy Registrar, and District Registrars	104	Moravian	3

A rise or fall in marriage rates, or in the value of exports or imports, is generally regarded as being in some degree indicative of a corresponding change in the prosperity of a country. The following table shows the variation year after year from 1881 to 1895 in such rates and values in South Australia :—

Year.	Marriage Rate per 1,000 of Mean Population.	Value per Head of Mean Population.		
		Imports Retained for Home Consumption.	Exports of South Australian Produce.	Imports and Exports United.
		£ s. d.	£ s. d.	£ s. d.
1881.....	8.31	16 1 3	13 2 5	29 3 8
1882.....	8.87	19 8 4	14 13 9	34 2 1
1883.....	8.64	16 14 5	11 17 4	28 11 9
1884.....	8.42	14 11 2	17 8 10	32 0 0
1885.....	7.93	13 15 11	14 4 2	28 0 1
1886.....	6.51	10 9 11	9 5 11	19 15 10
1887.....	6.48	10 4 0	10 19 5	21 3 5
1888.....	6.82	10 3 0	15 5 9	25 8 9
1889.....	6.69	10 10 4	11 19 10	22 10 2
1890.....	7.17	12 6 11	14 3 2	26 10 1
1891.....	7.31	13 0 11	14 16 0	27 16 11
1892.....	6.51	8 12 8	9 18 9	18 11 5
1893.....	6.27	8 4 5	9 15 11	18 0 4
1894.....	6.09	6 12 3	9 14 10	16 7 1
1895.....	5.88	5 11 8	10 3 0	15 14 8

It is the opinion of statisticians that if through a series of years the number of marriages in each year be compared with the number of legitimate births in the following year a very fair estimate can be obtained of the average number of children born to each married couple. Although the figures of a long series of years are required to demonstrate the correctness of this opinion, it is generally only necessary to examine those of a few years to obtain estimates that may be relied on. The following figures show the proportions of births to each marriage in South Australia for ten years, in each instance the births compared being for the year given and the marriages for the year before :—

1886	4.46
1887	5.34
1888	5.17
1889	4.83
1890	4.90
1891	4.66
1892	4.42
1893	4.90
1894	4.81
1895	4.87
Mean	4.84

It would seem from these figures that 4.84 (nearly 5) is the average number of children born in South Australia to each marriage. This is above the average in England and Scotland, and below that in Ireland, and in the Australasian colonies is excelled only by the average in New Zealand (5.16). In Western Australia the average is 4.82; in Tasmania, 4.75; in New South Wales, 4.70; in Queensland, 4.62; and in Victoria, 4.19.

GENERAL RESULTS OF THE YEAR FOR THE COLONY.

Viewed as a whole, 1895 was not a favorable year with respect to population, births, or marriages; but in reference to the death record the colony has never known a better year.

ADELAIDE AND SUBURBS.

As explained in the annual report for 1888, by “Adelaide and suburbs” is meant an area consisting of the four registration districts of Adelaide, Norwood, Hindmarsh, and Port Adelaide. Within this area (which is 262 square miles in extent) there are, in addition to the city of Adelaide, nine corporate towns and many other towns and villages. The estimated population of Adelaide and suburbs on December 31st, 1895, was 144,352 (69,602 males and 74,750 females), being more by 1,689 than the estimated population at the beginning of the year. The estimated mean population for 1895 was 143,507 (69,319 males and 74,188 females). The births registered during the year numbered 4,456 (2,281 males and 2,175 females), being more by 116 than those recorded in 1894. The birth rate per 1,000 of the mean population was 31.05, against 30.65 in the previous year. It was higher by 0.82 than that of the whole colony, and higher by 3.97 than the birth rate of the city of Adelaide taken by itself. The deaths registered in Adelaide and suburbs in 1895 numbered 2,133 (1,156 males and 977 females), being more by 173 than those recorded in the previous year. The death rate per 1,000 of the mean population was 14.86, against 13.84 in 1894. It was higher by 3.61 than that of the whole colony, but lower by 7.11 than the death rate of the city of Adelaide taken by itself—that is, the city death rate including all deaths in public institutions.

The following table shows the rates of infantile mortality in Adelaide and suburbs in the years specified—that is, the proportion of deaths of children under 1 year of age to 100 births registered :—

1886	15.75
1887	12.68
1888	11.58
1889	11.58
1890	11.95
1891	11.88
1892	11.79
1893	12.59
1894	10.60
1895	12.16

It will be seen that in every one of these years the rate was higher than the corresponding rate for the whole colony shown in a previous table.

For comparison, the birth and death rates (inclusive of all births and deaths in public institutions) per 1,000 of the mean population of the capital cities and suburbs of the colonies and of several of the largest towns in Great Britain are hereby given. The figures for the British towns have been taken from the returns of the Registrar-General of England, while those for the colonial capitals have, for the most part, been extracted from special returns which, on application, were supplied to this office by the statistical authorities of the different colonies :—

	Births, 1895.	Deaths, 1895.		Births, 1895.	Deaths, 1895.
Adelaide	31·05	14·86	Greater London.....	30·1	18·4
Melbourne	29·80	15·97	Manchester.....	33·7	25·2
Sydney	30·67	13·18	Liverpool	36·9	28·8
Brisbane	31·49	12·09	Birmingham	32·4	20·3
Perth	34·68	26·05	Leeds	31·6	20·5
Hobart	25·89	16·03	Edinburgh	27·1	20·7
Wellington.....	29·26	12·50	Glasgow	32·9	23·5

There were 1,101 marriages celebrated in Adelaide and suburbs in 1895. The marriage rate (that is, the rate of marriages, not of persons married) per 1,000 of the mean population was 7·67, which was greater by 1·79 than the marriage rate for the whole colony.

CITY OF ADELAIDE.

The estimated population of the city on December 31st, 1895, was 40,406 (19,253 males and 21,153 females), being an increase of 239 for the whole year. The births registered numbered 1,091, being fewer by 39 than those of the previous year; and the deaths 885, being more by 107 than those of the previous year. In several of the numbered tables accompanying this report (particularly tables 21, 22, and 23) will be found statistics referring specially to the city.

The statistical authorities of the different colonies do not agree as to how far births and deaths occurring in public institutions, such as hospitals, asylums, goals, &c., should be included, or whether any of them at all should be included, in the calculation of the birth and death rates of cities or other large towns. Nor, in reference to this matter, are they agreed as to what institutions should be comprehended under the description “public,” some giving a much wider meaning to the term “public institutions” than others do. The only comparison, therefore, that can be conveniently made between the birth and death rates of the city of Adelaide and those of other large colonial towns is one between the rates inclusive of all births and deaths in public institutions. The following figures show the rates per 1,000 of mean population in the towns named, exclusive of suburbs. They are in all cases the rates inclusive of all births and deaths in public institutions :—

	Births, 1895.	Deaths, 1895.
Adelaide.....	27·08	21·97
Melbourne.....	31·41	27·94
Bendigo.....	39·36	20·88
Ballarat.....	32·83	19·26
Geelong.....	31·21	19·00
Sydney	29·72	16·51
Hobart	27·70	13·18
Launceston	29·50	14·09
Wellington	28·30	13·07
Dunedin	19·87	10·21
Auckland	28·04	14·87

The marriages celebrated in the city of Adelaide in 1895 numbered 559. The marriage rate (that is, the rate of marriages, not of persons married) per 1,000 of the mean population was 13·88. It is probable, however, that not more than half the persons married in the city had their usual residence therein.

CORPORATE TOWNS.

In table No. 25 accompanying this report will be found the usual statistics with respect to the population, births, and deaths of twenty-three corporate towns, including the city of Adelaide. The birth and death rates per 1,000 of mean population in the towns referred to in the table, taken in groups, were as follows :—

	Births, 1895.	Deaths, 1895.
Municipality of Adelaide.....	27·08	21·97
Nine suburban corporate towns	31·81	12·17
Thirteen outside corporate towns	36·23	14·67
The twenty-three towns collectively.....	31·20	15·70

NORTHERN TERRITORY.

The following table shows the estimated population of the Northern Territory (exclusive of aborigines) in the year 1895 :—

	Males.	Females.	Persons.
Estimated population, January 1st, 1895.....	4,325	357	4,682
Births during the year	19	11	30
Immigration during the year	366	65	431
Deaths during the year	4,710	433	5,143
Emigration during the year	38	4	42
Estimated population, December 31st, 1895	4,672	429	5,101
Estimated mean population of the year	302	47	349
Estimated population, January 1st, 1895.....	4,370	382	4,752
Estimated mean population of the year	4,344	369	4,713

The following table shows the estimated population (exclusive of aborigines) divided into persons of European race and those of other races :—

	Males,		Females.		Total.
Europeans—January 1st, 1895	1,089	293	1,382
“ December 31st, 1895	1,074	289	1,363
Asiatics (chiefly Chinese) and others—Jan. 1st, 1895..	3,236	64	3,300
“ “ “ Dec. 31st, 1895.	3,296	93	3,389

The births registered in 1895 numbered 30 (19 males and 11 females), the deaths 42 (38 males and 4 females), and the marriages 5. Of these the European births were 23 (15 males and 8 females), and the European deaths 13 (11 males and 2 females). The general birth rate per 1,000 of the mean population was 6·37, the death rate 8·91, and the marriage rate 1·06. The European birth rate per 1,000 of the mean European population was 16·74, and the death rate 9·46. No inference, however, of statistical value can be drawn from these rates owing to the smallness of the numbers dealt with and the abnormal state of the population in regard to the distribution of sex and of age.

The following table shows the causes of deaths in the Territory, arranged as nearly as possible in the usual nosological order of sequence, and the number and ages of the deceased :—

Causes of Death.	All Ages.			Under 1 Year.	1—5.	5—10.	10—20.	20—40.	40—60.	60—80.	80 and Up- wards.	Not Stated.

COMPARATIVE STATISTICS.

The following tabular statement shows the rates of births, deaths, and marriages per 1,000 of mean population in the Australasian colonies, the different parts of the United Kingdom, and several other countries. The figures in the first seven lines have been taken from the returns of the statistical authorities of the different colonies named—for the most part from returns which, on application, were specially supplied to this office. The remainder of the figures have either been extracted unaltered or been deduced by calculation from the returns of the Registrar-General of England, who obtains his information respecting other countries from the several official authorities of those countries :—

		Births.	Deaths.	Mar- riages.			Births.	Deaths.	Mar- riages.
South Australia	1895	30·23	11·25	5·88	France	1893	22·9	22·8	7·5
Victoria	1895	28·56	13·25	6·06	The German Empire	1894	35·8	22·3	7·9
New South Wales	1895	30·66	11·79	6·35	Prussia (separately)	1894	36·6	21·8	8·0
Queensland ..	1895	32·85	11·38	6·23	Austria	1893	38·1	27·2	8·0
Western Australia	1895	25·62	17·32	6·83	Italy	1894	35·8	25·0	7·5
Tasmania	1895	30·09	11·38	5·31	Switzerland	1894	28·2	20·7	7·4
New Zealand	1895	26·78	9·91	5·94	Belgium	1894	28·8	18·8	7·6
United Kingdom (as a whole) ..	1894	28·9	16·8	7·1	The Netherlands	1894	32·7	18·5	7·2
England and Wales	1894	29·6	16·6	7·5	Norway	1894	29·7	16·9	6·4
Ireland	1894	22·9	18·2	4·7	Sweden	1893	27·4	16·8	5·7
Scotland	1894	30·1	17·2	6·7	Hungary	1893	42·5	31·1	9·3

The rates for other European countries (Denmark, Spain, &c.) have not been given in this table, because in the returns accessible they are not calculated on mean populations, and no data are given by means of which this defect could be remedied. The deaths of French persons abroad, civil and military, are registered in France, and this may have the effect of causing the death rate there to be somewhat overstated. It will be seen that in the comparative statement as it stands South Australia shows the ninth highest birth rate, the fourth lowest marriage rate, and the second lowest death rate. If, however, the seven Australasian colonies alone are considered, South Australia shows the third highest birth rate, the second lowest marriage rate, and the second lowest death rate.

The following table shows the estimated population in each of the seven Australasian colonies on December 31st, 1895. The numbers given are *exclusive of the aborigines*, except that in the case of New Zealand, over 2,000 half-castes, living as Europeans, are included :—

	Males.		Females.		Total.
New South Wales	681,390	..	589,434	..	1,270,824
Victoria	604,838	..	576,347	..	1,181,185
Queensland	259,160	..	201,390	..	460,550
South Australia, proper	181,161	..	171,492	..	352,653
“ Northern Territory ..	4,370	..	382	..	4,752
Tasmania	85,303	..	75,530	..	160,833
Western Australia	69,727	..	31,508	..	101,235

NOTE.—This table is intended to afford the means of comparing the weather and its changes with the general mortality, the mortality among young children and old people, and the mortality from certain diseases, the malignancy of which depends, it is believed, very much on the state of the weather.

G. H. AYLIFFE, Registrar-General of Births, &c.

APPENDICES.

APPENDICES.

BIRTHS, MARRIAGES, AND DEATHS.

No. 1.—RETURN showing the Number of Births, Marriages, and Deaths which were registered in the Province (exclusive of the Northern Territory) in the Year 1895, and the Proportion of Births, Marriages, and Deaths to every thousand persons living.
